COFACTOR: Binds a 4Fe-4S cluster which is not important for the COFACTOR: Binds a 4Fe-4S cluster which is not important for the catalytic activity, but which is probably involved in the proper positioning of the enzyme along the DNA strand (By similarity).

SIMILARITY: BELONGS TO THE NTH/MUTY FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Adenine

"ISOlation and characterization of a second exe operon required for Isolation and characterization of a second exe operon required for extracellular protein secretion in Aeromonas hydrophila.";
-I. FUNCTION: ADENINE GLYCOSYLASE ACTIVE ON G-A AND C-A MISPAIRS (BY SIMILARITY).

(BY SIMILARITY).
-I. COPACTOR: BINDS A 4FE-4S CLUSTER WHICH IS NOT IMPORTANT FOR THE POSITIONING OF THE ENZYME ALONG THE DNA STRAND (BY SIMILARITY).

-I. SIMILARITY: BELONGS TO THE NTH/MUTY FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: HAS BOTH AN APURLWIC AND/OR APYRIMIDINIC ENDACTIVITY AND A DNA N-GLYCOSYLASE ACTIVITY. INCISES DAY CYTOSINES, THYMINES AND GUANINES. ACTS ON A DAWAGED ST FROM THE DAWAGED SITE (BY SIMILARITY).

CATALYTIC ACTIVITY: The C-O-P bond 3, to the apurinic apyrimidinic site in DNA is broken by a beta-eliminatilleaving a 3, terminal unsaturated sugar and a product
                                                                                                                                                                                                                                                                                                                                                    COFACTOR: BINDS A 4FE-4S CLUSTER WHICH IS NOT IMPORTANT FOR THE CATALYTIC ACTIVITY, BUT WHICH IS PROBABLY INVOLVED IN THE PROPER POSITIONING OF THE ENZYME ALONG THE DNA STRAND (BY SIMILARITY). SIMILARITY: BELONGS TO THE NTH/MUTY FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                           leaving a 3'-terminal terminal 5'-phosphate.

PMOTOLASE: Nuclease: Endonuclease: Nua
                mitted (AUG-1995) to the EMBL/GenBank/DDBJ databases.
FUNCTION: Has both an apurinic and/or apyrimidinic endonuclease activity and a DNA N-glycosylase activity (By similarity).
apyrimidinic ACTIVITY: The C-O-p bond 3' to the apurinic or leaving a 3'-terminal unsaturated sugar and a product with a terminal 5'-phosphate.
COFACTOR: Binds a 4Fe-4S cluster which is not important for the catalytic activity, but which is probably involved in the proper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE

                                                                                                                                                                         -I- FUNCTION: Has both an apurinic and/or apyrimidinic endonuclease activity and a DNA N-glycosylase activity. Incises damaged DNA at cytosines, thymines and guanines. Acts on a damaged strand, 5' from the damaged site. Regulired for the repair of both oxidative DNA damage and spontaneous mutagenic lesions.
-I- CARALYTIC ACTIVITY: The C-O-P bond 3' to the appurinic or apyrimidinic site in DNA is broken by a beta-elimination reaction, leaving a 3'-terminal unsaturated sugar and a product with a terminal 5'-phosphate.
-I- COFACTOR: Binds a 4Fe-4S cluster which is not important for the catalytic activity, but which is probably involved in the proper positioning of the enzyme along the DNA strand.
-I- SIBCELLULAR LOCATION: Nuclear.
-I- TISSUE SPECIFICITY: Widely expressed with highest levels in heart and lowest levels in lung and liver.
-I- DEVELOPMENTAL STAGE: Expression levels are regulated during the call cycle with increased levels during early and mid S-
                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright. RT THOMATON: Has both an apurinic and/or apprimidinic endonuclease crivity and a DNA N-glycosylase activity. Incises damaged DNA at CC cytosines, thymines and guanines. Acts on a damaged strand, 5' CC from the damaged stre. Required for the repair of both oxidative activity. The C-O-p bond 3' to the apurinic or leaving a 3'-terminal unsaturated sugar and a product with a cc leaving a 3'-terminal unsaturated sugar and a product with a cc catalytic activity, but which is probably involved in the proper cc similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RA Schriml L.M., Kanapin A., Matsuda H., Batalov S., Beisel K.W., RA Blake J.A., Bradt D., Brusic V., Chothia C., Corbani L.E., Cousins S., RA Blake J.A., Bradt D., Brusic V., Chothia C., Corbani L.E., Cousins S., RA Blake J.A., Bradt D., Brusic V., Chothia C., Corbani L.E., Cousins S., RA Gassterland T., Gariboldi M., Gissi C., Godzik A., Frazer K.S., RA Grimmond S., Gustincich S., Hirokawa N., Jackson I.J., Jarvis E.D., RA Konajaya A., Kurochkin I.V., Lee Y., Lenhard B., Lyons P.A., RA Konajaya A., Kurochkin I.V., Lee Y., Lenhard B., Lyons P.A., RA Magashima T., Numata K., Okido T., Pavan W.J., Pertea G., Pesole G., RA Petrovsky N., Pillai R., Pontius J.U., Qi D., Ramachandran S., RA Petrovsky N., Pillai R., Pontius J.U., Qi D., Ramachandran S., Sandelin A., Schneider C., Semple C.A., Setou M., Shimada K., Sultana R., Takenaka Y., Taylor M.S., Teasdale R.D., Tomita M., Sultana R., Wayner L., Wahlestedt C., Wang Y., Watanabe Y., Wells C., RA Wilming L.G., Wynshaw-Borls A., Yanagisawa M., Yang I., Yang L., Yang L., Zavolan M., Zhu Y., Zimmer M., Carninci P., Hayatsu N., RA Hara A., Hashizume W., Imotani K., Ishii y., Itoh M., Kagawa I., RA Hara A., Hashizume W., Imotani K., Ishii Y., Itoh M., Kagawa I., RA Hara A., Hashizume W., Sasaki D., Shibata K., Shinagawa A., RA Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Ra Birney E., Hayashizaki Y., Sasaki D., Shibata K., Shinagawa A., Shinagawa S., Sh
